SUMMARY

Software engineer specialising in applied AI systems, with ten years' production mobile engineering behind it: Android in Java and Kotlin, then Flutter and Dart. AI-assisted development (Claude Code, GitHub Copilot) is a daily production workflow, not an experiment: builds and orchestrates agent tooling as well as using it. Independently designed, built and deployed a four-layer AI inference system end to end: an on-device model, an edge classifier, a Retrieval-Augmented Generation (RAG) chatbot, and cloud LLM generation, including provisioning and hardening the server it runs on, and benchmarking candidate embedding models rather than picking one by reputation. A Master's-level application security background, three years as an Application Security Engineer, brings a DevSecOps mindset to AI system design: untrusted input reaching a model, and the infrastructure it runs on, are both treated as security problems from day one.

CORE SKILLS

AI-Assisted Engineering

Claude Code & GitHub Copilot (daily, production, multi-model) · agent skill design · multi-agent orchestration · Agentic AI · Generative AI · Retrieval-Augmented Generation (RAG) · Large Language Models (LLM) · Natural Language Processing (NLP) · vector search & embeddings · embedding model evaluation · prompt engineering

Cloud & Infrastructure

Linux server administration · nginx, systemd, TLS, firewalls · AWS · Azure DevOps · CI/CD · DevOps · Git

Backend & Web

Python (FastAPI) · RESTful APIs · C# / .NET · JavaScript / Node.js · SQL / SQLite

Mobile Development

Flutter & Dart · cross-platform development · Kotlin · Java · Android platform (10 years production) · Firebase · RxJava · Gradle

Application Security

Penetration testing · vulnerability assessment · secure code review · OWASP Top 10 · security automation & DevSecOps · CompTIA Security+ ce

Leadership

Scrum Master · Agile/Scrum methodologies · retrospectives, planning & refinement · cross-functional collaboration & stakeholder management

Software Engineer · AI Talent

Apr 2026 – Present

Remote, Brisbane

- Build and ship Flutter/Dart applications backed by Firebase in an Agile team.
- Use Claude Code and GitHub Copilot daily, across multiple underlying models, as a working method rather than an experiment, central to production delivery and code quality review.
- Independently designed, built and deployed a four-layer AI inference portfolio system (on-device browser model, edge classifier, RAG chatbot, cloud API generation) on self-provisioned and hardened infrastructure, with the architectural reasoning and rejected alternatives published in a public decision log.

Application Security Engineer · PropertyMe

CONCURRENT

Apr 2023 – Apr 2026

Remote, held concurrently with the Software Engineer role below

- Designed and implemented application security controls and countermeasures against real-world threats and vulnerabilities.
- Conducted code reviews, vulnerability assessments and penetration testing across the product.
- Built automation that shifted security left, so secure code became the default rather than something fixed after the fact.

Software Engineer · PropertyMe

Feb 2022 – Apr 2026

Remote

- Built and maintained Flutter applications for PropertyMe's owner and tenant user bases, the market-leading property management app for both audiences.
- Worked in close collaboration with product and design on new features and improvements.
- Acted as the driving force of automation across the team's tooling and process.

Android Developer · Gruntify

Apr 2020 – Jan 2022

Contract, hybrid, Australia

- Built the primary Android interface for a GIS field-services platform, used by both inspection teams and field workers for job requests, forms, media capture and live location.
- Kotlin, Java, augmented reality features, SQLite, RxJava, Firebase.

EARLIER EXPERIENCE

VR/AR Developer · vreestory (freelance)2018 – 2020

Unity3D/C# advertising, government-commissioned education and safety-training experiences for clients including OMV, Wincanton and Lions Gate Entertainment. Ran alongside full-time roles below.

Software Engineer · Ozone.bgApr – Nov 2019

Digitised five warehouse processes onto Zebra TC8000 industrial scanners running in kiosk mode. The warehouse's physical operations depended on that software staying up. Also built the driver logistics application.

Software Engineer · Musala SoftNov 2018 – Apr 2019

Montblanc Hub, the companion app for a smart writing hardware set.

Software Developer · Software GroupApr – Nov 2018

Banking software for regulated financial institutions, including Banque Atlantique.

VR Developer · SolvedOutNov – Dec 2017

Hellboy VR, a dual 8K stereoscopic cinematic VR experience for Lions Gate Entertainment, delivered on Google Cardboard.

Android Developer · TERACOMM, part of AlltercoNov 2016 – Oct 2017

First engineering role. Consumer IoT (MyKi children's smartwatch), a neonatal-monitoring proof of concept, and telecom/TV client projects.

EDUCATION

Master of Information Technology (Cyber Security and Network Security)

Charles Sturt University, Australia · 2021 – 2023 · Distinction average (6.25 / 7)

Academic Achievement Award (2021) · Executive Dean's Award (2022) · ranked top 1% worldwide on TryHackMe during study. Completed while working full time.

Master's Degree in Finance

New Bulgarian University · 2006 – 2016

IT Talents Training Camp

Software engineering bootcamp, Bulgaria

Entry point into software engineering, leading directly to a first Android Developer role.

CompTIA Security+ ce

Google Cybersecurity Certificate

Career Essentials in Generative AI (Microsoft/LinkedIn)

Microsoft SC-200 Security Operations Analyst

Google Cybersecurity Specialization (8 courses)

67 LinkedIn Learning courses
